

BC-GARD SL AS

A SELF - SMOOTHING ESD EPOXY TOPPING

DESCRIPTION:

BC-GARD SLAS is a Self-smoothing ESD (Anti-static) epoxy resin floor finish applied at 1mm~2mm. seam less, high mechanical, conductive properties, good abrasion resistance glossy finishing and available in a wide range of attractive colour.

PRODUCT FEATURE:

BC-GARD SLAS is high-tech manufacturing requires flooring with conductive properties, and use for GMP, Hygienic where the subjected to medium traffic, impact and surface is required without the risk of static build up floor. Areas use for military arsenal, ammunition dump, electronic, semi-conducting device areas, high power station and explosion risk plants. Clean Room, warehouse, Assembly Automotive Plant, Aircraft Hangar, Electronic Plant, research and Development Lab

BCCHO SLAS REPRIME VO AS BLOCKNIVER REPRIME VO AS BLOCKNIVER BCCHO SLOS AND SCONFOUND OR RECEND SCONFOUND SLOSS TRATE

BENEFITS:

- Seamless, monolithic application
- Solvent free, low odor- and V.O.C
- Hygienic, easy to clean
- ➢ High chemical resistance to wide range of chemical.
- Abrasion resistant, against medium traffic and trolley movement.
- Hard wearing floors finish
- Wide range of colours
- To eliminate electrostatic discharge from human body, trolley and vehicles. Meet British standard BS 2050
- Complied with BS6920 requirement

COLORS:

RAL K5 Classic Colour Chart available

FINISHING:

Gloss

SUBSTRATE REQUIREMENT & PREPARATION:

Substrate concrete or screed should be a minimum of compressive strength 25N/mm² and adhesive pull-off strength of minimum 1.5N/mm². The substrate should be clean and free from laitance, oil, dust, loose constituents, paint residues, chemicals, algae and other contamination should be removed. The substrate should be dry and free from ground water pressure. If substrate moisture exceeded 4%, apply BC-GARD EM epoxy mortar (compressive strength 60N/mm²) 4-5mm thick or Apply BC-Cem MB 2-3mm thick as a moisture barrier. The substrate must be prepared by vacuum shot blasting, rough contaminations to remove by grinding. Cracks and hollows should be properly remedied. Prepare grooves 3mm wide x 3mm deep at all edges, bay joints columns, doorways and drains for anchoring purpose.

MIXING :

Stir Part A mix for 30 seconds by using a suitable electrical stirrer (with 750 watt High power mixer), than add all of Parts B (Hardener) and mix both liquid parts thoroughly for 2 minute until it fully achieved a homogeneous.

APPLICATION :

- Apply BC-Prime WB AS Black primer@ 0.2kg/m² as a primer for sealing well the substrate porosity.
- Usually within 8-14hours; BC-Prime WB AS Black primer cured, Then only allow to do layering BC-GARD SLAS. Topping onto the BC-Prime WB AS Black primer.
- Apply BC-GARD SLAS within the pot life (working time), spread the composite matrix with notched squeegee or pin rake and set it to the correct depth or requirement thickness. Immediately release the air/bubble by using spike roller.

TEMPERATURE CONDITIONS APPLICATIONS:

- Do not apply when the relative humidity exceeds 90% on when the surface to be coated is less than 5% above the dew point.
- Do not apply temperatures below5°C and temperatures above 40°C

Maintenance and care after cure :

We recommend basic cleaning and maintenance will prolong the life of epoxy floors, clean regularly using a single or double headed rotary scrubber drier in conjunction with alkaline detergent.

Further Information :

Warning and precautions information relating to the safe handling of this product should be found in Material Safety Data Sheet. To be advise to put on suitable clothing and eyeware for protection purpose. The application area/site must be in good ventilation otherwise advisable to use a portable exhaust fan.

Important Note:

Best Crete products are warranty against defective materials. Due to different substrate and working conditions, no guarantee of an application result or any liability claims. The users are required to have a test ahead based on their intended use.
